# Jordan Kim

Data Science New Graduate | Analytics Engineering, Forecasting, Experimentation | UT Austin

Austin, Texas, United States

## Summary

I am a data science graduate who enjoys building trusted datasets, decision-ready dashboards, and forecasting systems that operations teams can actually use. My internship work has covered logistics analytics, experimentation, customer retention, and data-quality monitoring across SQL, Python, dbt, and cloud warehouses. I care about documenting assumptions, validating metrics, and explaining uncertainty rather than treating models as black boxes. I am seeking analytics engineering, product analytics, or applied data science roles where I can combine technical depth with clear business communication.

## Experience

### ClearRoute Logistics

Data Analytics Intern

January 2026 - May 2026

Austin, TX

Built dbt models that unified shipment, carrier, warehouse, and customer-service data into 24 documented analytics marts used by five operating teams. Developed a late-delivery risk model with gradient boosting and calibrated probabilities, improving identification of high-risk shipments by 23% at a fixed review capacity. Created Tableau dashboards for lane performance, detention costs, and carrier scorecards, replacing 11 recurring spreadsheet reports. Implemented freshness and reconciliation tests that caught three upstream schema changes before executive reporting was affected.

### UT Austin Population Research Center

Research Data Assistant

September 2024 - December 2025

Austin, TX

Cleaned and linked 1.4 million anonymized survey and administrative records using reproducible Python pipelines and probabilistic matching rules. Documented missing-data patterns and created weighted summary tables for a longitudinal study of student employment and degree completion. Automated disclosure-review checks and reduced dataset release preparation from four days to one day.

Synthetic QA LinkedIn-style profile - all details fictional

## Core Tools

SQL

dbt

scikit-learn

Tableau

Git

## Portfolio

github.com/jordankim-data

jordankim.example.com

## Focus Areas

Production systems

Testing and quality

Clear documentation

Measurable outcomes

# Experience

### Blue Mesa Credit Union

Business Intelligence Intern

May 2025 - August 2025

San Antonio, TX

Analyzed digital-banking funnel behavior for 68,000 members and identified two onboarding steps associated with a 17% abandonment increase. Built cohort-retention tables and presented findings that informed revised reminder timing and simplified identity-verification copy.

---

# Projects

### Retail Demand Forecasting System

Python, LightGBM, MLflow, DuckDB

January 2026 - April 2026

Forecasted weekly demand for 320 products across 18 stores using promotions, holidays, stockouts, and local event features. Compared seasonal naive, ARIMA, and gradient-boosted baselines through rolling-origin validation and improved weighted absolute error by 16%. Tracked experiments and model artifacts in MLflow and generated exception reports for low-confidence forecasts.

### Subscription Churn Investigation

SQL, Python, Survival Analysis, Streamlit

September 2025 - December 2025

Modeled time-to-churn for a synthetic subscription dataset and separated voluntary cancellation from payment-failure events. Built an interactive Streamlit report showing hazard curves, segment behavior, and sensitivity to intervention assumptions.

### Warehouse Data Quality Monitor

dbt, Snowflake, GitHub Actions, Slack

June 2025 - August 2025

Created 70 automated tests for nulls, uniqueness, referential integrity, freshness, and metric reconciliation across a dimensional warehouse. Added severity-based Slack alerts and runbook links, reducing time to diagnose broken transformations during simulations by 46%.

### City Mobility Experiment Dashboard

R, Quarto, Shiny, PostgreSQL

February 2025 - May 2025

Analyzed a randomized transit-message experiment and reported treatment effects with confidence intervals, subgroup checks, and pre-registered outcomes. Published a reproducible Shiny dashboard for nontechnical reviewers to explore assumptions without altering source data.

Synthetic QA LinkedIn-style profile - all details fictional

## Education

The University of Texas at Austin

Bachelor of Science - BS, Statistics and Data Science

## Credentials

Tableau Desktop Specialist - 2025

dbt Fundamentals - 2025

## Honors

University Honors, 2024-2026

Capstone Showcase - Best Analytics Communication, 2026

## Profile Note

This is a synthetic profile created for document-processing and token-tuning QA.

# Education

The University of Texas at Austin
Bachelor of Science - BS, Statistics and Data Science
August 2022 - May 2026

**Relevant coursework:** Statistical Modeling, Machine Learning, Data Mining, Experimental Design, Database Management, Optimization, Time Series, Econometrics

---

# Licenses & Certifications

**Tableau Desktop Specialist - 2025**
Issued for skills validation in this synthetic QA profile.

**dbt Fundamentals - 2025**
Issued for skills validation in this synthetic QA profile.

---

# Volunteer Experience

**Texas Data Science Club**
Texas Data Science Club - workshop coordinator for SQL optimization, dashboard design, and interview-case practice.

**Undergraduate Statistical Association**
Undergraduate Statistical Association - peer tutor for probability, regression, and experimental design.

**Central Texas Food Bank volunteer**
Central Texas Food Bank volunteer - supported inventory counts and route-packing analytics during monthly distribution events.

---

# Skills

**Programming**
SQL, Python, R, Bash

**Analytics Engineering**
dbt, Snowflake, BigQuery, DuckDB, dimensional modeling, data testing

**Machine Learning**
scikit-learn, LightGBM, XGBoost, survival analysis, time-series forecasting

**Visualization**
Tableau, Power BI, Streamlit, Shiny, Quarto

**Tools**
Git, GitHub Actions, MLflow, Excel, Jupyter, Linux
