JORDAN KIM

Austin, Texas | (512) 555-0196 | jordan.kim@example.com | GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

I am a data science graduate who enjoys building trusted datasets, decision-ready dashboards, and forecasting systems that operations teams can actually use. My internship work has covered logistics analytics, experimentation, customer retention, and data-quality monitoring across SQL, Python, dbt, and cloud warehouses. I care about documenting assumptions, validating metrics, and explaining uncertainty rather than treating models as black boxes. I am seeking analytics engineering, product analytics, or applied data science roles where I can combine technical depth with clear business communication.

EDUCATION

The University of Texas at Austin - Bachelor of Science - BS, Statistics and Data Science May 2026 | Austin, Texas
Relevant Coursework: Statistical Modeling, Machine Learning, Data Mining, Experimental Design, Database Management, Optimization, Time Series, Econometrics

EXPERIENCE

Data Analytics Intern | ClearRoute Logistics January 2026 - May 2026 | Austin, TX

- Built dbt models that unified shipment, carrier, warehouse, and customer-service data into 24 documented analytics marts used by five operating teams.
- Developed a late-delivery risk model with gradient boosting and calibrated probabilities, improving identification of high-risk shipments by 23% at a fixed review capacity.
- Created Tableau dashboards for lane performance, detention costs, and carrier scorecards, replacing 11 recurring spreadsheet reports.
- Implemented freshness and reconciliation tests that caught three upstream schema changes before executive reporting was affected.

Research Data Assistant | UT Austin Population Research Center September 2024 - December 2025 | Austin, TX

- Cleaned and linked 1.4 million anonymized survey and administrative records using reproducible Python pipelines and probabilistic matching rules.
- Documented missing-data patterns and created weighted summary tables for a longitudinal study of student employment and degree completion.
- Automated disclosure-review checks and reduced dataset release preparation from four days to one day.

Business Intelligence Intern | Blue Mesa Credit Union May 2025 - August 2025 | San Antonio, TX

- Analyzed digital-banking funnel behavior for 68,000 members and identified two onboarding steps associated with a 17% abandonment increase.
- Built cohort-retention tables and presented findings that informed revised reminder timing and simplified identity-verification copy.

SELECTED PROJECTS

Retail Demand Forecasting System / *Python, LightGBM, MLflow, DuckDB* January 2026 - April 2026

- Forecasted weekly demand for 320 products across 18 stores using promotions, holidays, stockouts, and local event features.
- Compared seasonal naive, ARIMA, and gradient-boosted baselines through rolling-origin validation and improved weighted absolute error by 16%.
- Tracked experiments and model artifacts in MLflow and generated exception reports for low-confidence forecasts.

Subscription Churn Investigation / *SQL, Python, Survival Analysis, Streamlit* September 2025 - December 2025

- Modeled time-to-churn for a synthetic subscription dataset and separated voluntary cancellation from payment-failure events.
- Built an interactive Streamlit report showing hazard curves, segment behavior, and sensitivity to intervention assumptions.

ADDITIONAL EXPERIENCE HIGHLIGHTS

- Worked across ClearRoute Logistics, UT Austin Population Research Center, and Blue Mesa Credit Union in roles requiring independent implementation, structured review, and clear status communication.
- Combined SQL, Python, Tableau with database, cloud, testing, and version-control workflows to move projects from initial requirements through documented validation.
- Balanced performance and reliability goals by measuring latency, throughput, data quality, or user completion before and after technical changes.
- Prepared design notes, test plans, demos, and handoff documentation so classmates, researchers, and internship teammates could reproduce results and maintain the work.

PROJECTS

Warehouse Data Quality Monitor / *dbt, Snowflake, GitHub Actions, Slack* June 2025 - August 2025

- Created 70 automated tests for nulls, uniqueness, referential integrity, freshness, and metric reconciliation across a dimensional warehouse.
- Added severity-based Slack alerts and runbook links, reducing time to diagnose broken transformations during simulations by 46%.

City Mobility Experiment Dashboard / *R, Quarto, Shiny, PostgreSQL* February 2025 - May 2025

- Analyzed a randomized transit-message experiment and reported treatment effects with confidence intervals, subgroup checks, and pre-registered outcomes.
- Published a reproducible Shiny dashboard for nontechnical reviewers to explore assumptions without altering source data.

SELECTED TECHNICAL CONTRIBUTIONS

- Designed project architecture for Retail Demand Forecasting System and Subscription Churn Investigation, separating interface, application, data, and infrastructure concerns to support iterative changes.
- Implemented validation and error-handling paths for expected inputs, malformed records, partial failures, retries, and recovery scenarios rather than testing only the happy path.
- Used automated unit, integration, or hardware/system tests to verify core behavior and added repeatable fixtures or seeded datasets for regression testing.
- Profiled or benchmarked critical workflows and used measured results to prioritize indexing, caching, batching, concurrency, memory, or communication improvements.
- Created deployment or build automation with version control and documented environment setup, configuration, observability, and rollback expectations.
- Presented technical tradeoffs to peers and nontechnical stakeholders, connected implementation choices to user or operational outcomes, and incorporated review feedback.

LEADERSHIP & ACTIVITIES

- Texas Data Science Club - workshop coordinator for SQL optimization, dashboard design, and interview-case practice.
- Undergraduate Statistical Association - peer tutor for probability, regression, and experimental design.
- Central Texas Food Bank volunteer - supported inventory counts and route-packing analytics during monthly distribution events.

TECHNICAL SKILLS

Programming: SQL, Python, R, Bash
Analytics Engineering: dbt, Snowflake, BigQuery, DuckDB, dimensional modeling, data testing
Machine Learning: scikit-learn, LightGBM, XGBoost, survival analysis, time-series forecasting
Visualization: Tableau, Power BI, Streamlit, Shiny, Quarto
Tools: Git, GitHub Actions, MLflow, Excel, Jupyter, Linux

ACADEMIC APPLICATIONS

- Applied Statistical Modeling, Machine Learning, and Data Mining concepts when selecting data structures, algorithms, interfaces, and performance constraints.
- Used ideas from Experimental Design and Database Management to design storage models, data flows, communication boundaries, or experiment plans.
- Connected classroom work in Optimization to maintainable code organization, testing strategy, documentation, and team review practices.
- Completed technical writing and presentation deliverables explaining assumptions, limitations, evaluation methods, and next-step recommendations.
- Maintained reproducible repositories with setup instructions, sample data, issue tracking, and versioned changes suitable for independent review.

CERTIFICATIONS

- Tableau Desktop Specialist - 2025
- dbt Fundamentals - 2025

HONORS & AWARDS

- University Honors, 2024-2026
- Capstone Showcase - Best Analytics Communication, 2026

ADDITIONAL DETAILS

Professional Interests: production-quality systems, measurable performance, careful testing, accessible documentation, and cross-functional delivery.

Profile Status: Synthetic testing profile; no real employment, credential, or identity claim is represented.
