Jordan Ellis

Senior Backend Engineer

San Francisco, CA

jordan.ellis@example.com | github.com/jellis | linkedin.com/in/jellis

PROFESSIONAL SUMMARY

Backend engineer with six years building distributed data platforms at scale.

Specializes in event streaming, Postgres performance, and reliability engineering.

EXPERIENCE

Northwind Systems, San Francisco, CA

Senior Backend Engineer (2022 - 2026)

- Built a Go event-ingestion service handling twelve million events per day.
- Cut p99 latency from eight hundred forty milliseconds to one hundred ninety.
- Migrated billing reconciliation to Postgres partitioning; nightly job six hours to forty minutes.
- Led the on-call rotation and drove incident count down sixty percent year over year.
- Designed the Kafka topic topology now used by four downstream teams.

Cobalt Labs, Austin, TX

Backend Engineer (2020 - 2022)

- Implemented an idempotent Stripe webhook receiver processing four hundred thousand events monthly.
- Added Redis-backed rate limiting; abuse-driven server errors dropped ninety two percent.
- Built the Testcontainers integration suite that caught fourteen regressions before release.

Initech, Remote

Software Engineer (2018 - 2020)

- Delivered customer-facing React features used by two million monthly users.
- Automated the continuous integration pipeline, halving release time.

PROJECTS

Raft consensus implementation in Rust with leader election and log replication.

Distributed key-value store with an LSM-tree storage engine at ninety thousand writes per second.

EDUCATION

Bachelor of Science in Computer Science, University of California Irvine, 2018.
