ROHAN BANERJEE

Pune, Maharashtra | +91 90000 33063 | rohan.banerjee@example.com | GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

I am an information technology graduate interested in cloud security, DevSecOps, and detection engineering. My internship experience includes infrastructure-as-code review, Kubernetes hardening, SIEM detections, incident triage, and automation for evidence collection. I like security work that is measurable and developer-friendly: controls that are testable, findings that include remediation context, and alerts tuned against realistic behavior. I am seeking cloud security, security engineering, or DevSecOps roles where I can help teams ship safely without creating unnecessary friction.

EDUCATION

Jadavpur University - Bachelor of Engineering - BE, Information Technology — June 2026 | Pune, Maharashtra
Relevant Coursework: Network Security, Operating Systems, Cloud Computing, Cryptography, Secure Coding, Databases, Computer Networks, Digital Forensics

EXPERIENCE

Cloud Security Engineering Intern | CloudHarbor Services — January 2026 - June 2026 | Pune, India

- Built Python and Terraform checks for public storage, overly broad IAM policies, missing encryption, unrestricted security groups, and unapproved regions across 46 AWS accounts.
- Integrated policy checks into pull requests and reduced repeat high-severity misconfigurations by 44% over one quarter.
- Hardened Kubernetes deployment templates with non-root containers, read-only filesystems, resource limits, network policies, and admission checks.
- Automated evidence collection for 23 audit controls and reduced monthly preparation time from 18 hours to 5 hours.

Security Operations Intern | SentinelBridge Technologies — May 2025 - August 2025 | Kolkata, India

- Triaged endpoint, identity, email, and cloud alerts in a training SOC and documented investigation paths for common false positives.
- Created Sigma-style detections for suspicious PowerShell, impossible travel, new privileged roles, and high-volume object downloads.
- Tuned three detections using 30 days of historical logs, reducing benign alert volume by 38% while preserving seeded attack cases.

Teaching Assistant - Network Security Lab | Jadavpur University IT Department — August 2025 - December 2025 | Kolkata, India

- Supported labs on TLS, authentication, firewalls, packet analysis, web vulnerabilities, secure coding, and incident reporting.
- Created isolated exercises that emphasized remediation and verification rather than exploit execution alone.

SELECTED PROJECTS

Cloud Posture Scanner / *Python, AWS SDK, Terraform, OPA, Docker* — September 2025 - February 2026

- Scanned infrastructure plans and deployed resources against 65 versioned policies with severity, evidence, owner, and remediation guidance.
- Added suppression rules with expiration dates and approval metadata to prevent permanent exceptions.
- Generated SARIF output for code-scanning interfaces and JSON summaries for dashboard ingestion.

Secure Collaborative File Vault / *Go, PostgreSQL, S3, KMS, React* — March 2025 - August 2025

- Built a file-sharing service with envelope encryption, short-lived download tokens, organization roles, and immutable audit events.
- Implemented resumable uploads and integrity verification for objects up to 2 GB in local performance tests.

ADDITIONAL EXPERIENCE HIGHLIGHTS

- Worked across CloudHarbor Services, SentinelBridge Technologies, and Jadavpur University IT Department in roles requiring independent implementation, structured review, and clear status communication.
- Combined Cloud Security, Python, AWS with database, cloud, testing, and version-control workflows to move projects from initial requirements through documented validation.
- Balanced performance and reliability goals by measuring latency, throughput, data quality, or user completion before and after technical changes.
- Prepared design notes, test plans, demos, and handoff documentation so classmates, researchers, and internship teammates could reproduce results and maintain the work.

PROJECTS

Phishing Triage Assistant / *Python, FastAPI, scikit-learn, YARA, Docker* January 2025 - April 2025

- Extracted URL, domain, header, attachment, and language features from a labeled email corpus and produced analyst-readable evidence summaries.
- Combined rules and a calibrated classifier to prioritize review while avoiding automatic blocking decisions.

Threat Intelligence Enrichment Pipeline / *Python, Kafka, Elasticsearch, Kibana* August 2024 - December 2024

- Normalized indicator feeds, deduplicated records, scored source confidence, and enriched IP/domain data with cached lookups.
- Created dashboards for feed freshness, indicator overlap, and investigation pivots.

SELECTED TECHNICAL CONTRIBUTIONS

- Designed project architecture for Cloud Posture Scanner and Secure Collaborative File Vault, separating interface, application, data, and infrastructure concerns to support iterative changes.
- Implemented validation and error-handling paths for expected inputs, malformed records, partial failures, retries, and recovery scenarios rather than testing only the happy path.
- Used automated unit, integration, or hardware/system tests to verify core behavior and added repeatable fixtures or seeded datasets for regression testing.
- Profiled or benchmarked critical workflows and used measured results to prioritize indexing, caching, batching, concurrency, memory, or communication improvements.
- Created deployment or build automation with version control and documented environment setup, configuration, observability, and rollback expectations.
- Presented technical tradeoffs to peers and nontechnical stakeholders, connected implementation choices to user or operational outcomes, and incorporated review feedback.

LEADERSHIP & ACTIVITIES

- Cybersecurity Society - blue-team lead for log-analysis workshops and incident-response tabletop exercises.
- Open-source contributor - added documentation and unit tests to security policy and cloud inventory tools.
- Student mentor - guided junior teams through secure architecture reviews for capstone projects.

TECHNICAL SKILLS

Languages: Python, Go, SQL, Bash, JavaScript

Cloud & Infrastructure: AWS, Kubernetes, Docker, Terraform, Linux, GitHub Actions

Security: IAM, cloud posture management, secure SDLC, SIEM, detection engineering, incident triage

Tools: Splunk, Elasticsearch, Wireshark, Trivy, OPA, Semgrep, Git

Practices: Threat modeling, policy as code, audit evidence automation, alert tuning, secure code review

ACADEMIC APPLICATIONS

- Applied Network Security, Operating Systems, and Cloud Computing concepts when selecting data structures, algorithms, interfaces, and performance constraints.
- Used ideas from Cryptography and Secure Coding to design storage models, data flows, communication boundaries, or experiment plans.
- Connected classroom work in Databases to maintainable code organization, testing strategy, documentation, and team review practices.
- Completed technical writing and presentation deliverables explaining assumptions, limitations, evaluation methods, and next-step recommendations.
- Maintained reproducible repositories with setup instructions, sample data, issue tracking, and versioned changes suitable for independent review.

CERTIFICATIONS

- AWS Certified Security - Specialty, 2026
- Microsoft SC-900 Security, Compliance, and Identity Fundamentals, 2025

HONORS & AWARDS

- National Cyber Defense Challenge - Top 10 Team, 2025
- Department Project Excellence Award, 2026

ADDITIONAL DETAILS

Professional Interests: production-quality systems, measurable performance, careful testing, accessible documentation, and cross-functional delivery.

Profile Status: Synthetic testing profile; no real employment, credential, or identity claim is represented.
