Arjun Mehta

Backend Engineer | Distributed Systems, Go, Java, Cloud Infrastructure | IIT Hyderabad Graduate

Bengaluru, Karnataka, India

Summary

I am a computer science graduate focused on backend engineering, distributed systems, and infrastructure that remains predictable under failure. I have built high-throughput services in Go and Java, implemented event-driven workflows with Kafka, and improved production reliability through tracing, load testing, and safer deployment automation. My strongest work combines systems fundamentals with practical delivery: clear APIs, measurable performance, and operational documentation. I am looking for backend or platform engineering roles where I can contribute to scalable services and continue developing expertise in distributed architecture.

Experience

NimbusCart Technologies

Backend Engineering Intern

January 2026 - June 2026

Bengaluru, India

Developed Go services for order-state transitions and inventory reservations, handling 1.8 million daily events through Kafka consumers with retry and dead-letter workflows. Reduced duplicate reservation incidents by 76% using idempotency keys, transactional outbox patterns, and reconciliation jobs. Improved 99th-percentile checkout latency from 1.6 seconds to 780 ms by profiling database access, adding composite indexes, and parallelizing independent calls. Created load tests and OpenTelemetry traces used in release gates for three critical services.

CodeCommons Fellowship

Open-Source Engineering Fellow

May 2025 - November 2025

Remote

Contributed streaming backpressure controls, structured error handling, and 140 unit tests to a community Java workflow engine. Wrote migration documentation for a breaking configuration update and collaborated with maintainers across four time zones. Resolved a race condition in worker shutdown that previously caused intermittent test failures in continuous integration.

Focus Areas

Production systems

Testing and quality

Clear documentation

Measurable outcomes

Experience

IIT Hyderabad CSE Department

Teaching Assistant - Operating Systems

August 2025 - December 2025

Hyderabad, India

Supported 96 students in labs covering processes, scheduling, virtual memory, file systems, synchronization, and network sockets. Designed debugging exercises for deadlocks and memory corruption and held weekly code-review sessions.

Projects

Replicated Commit Log

Go, gRPC, Raft, BadgerDB, Docker

August 2025 - December 2025

Implemented a three-node replicated log with leader election, append entries, snapshots, and recovery from persisted state. Built fault-injection tests for partitions, delayed messages, process restarts, and stale leaders across 160 deterministic scenarios. Measured sustained throughput of 31,000 append operations per second with quorum acknowledgments on local containers.

Payment Reconciliation Pipeline

Java, Spring Boot, Kafka, PostgreSQL, Redis

March 2025 - July 2025

Created an event-driven pipeline that matched gateway settlements to internal transactions and generated exception queues for missing or conflicting records. Added exactly-once business semantics through deduplication tables and compensating updates rather than relying on broker guarantees alone.

Semantic Code Search

Python, FastAPI, FAISS, Tree-sitter, React

January 2025 - April 2025

Indexed functions from 420 public repositories using syntax-aware chunking and hybrid lexical/vector retrieval. Improved top-five relevance by 19 percentage points over a keyword baseline on a manually labeled query set.

Campus Shuttle Tracker

Go, WebSockets, TimescaleDB, Flutter

September 2024 - December 2024

Processed simulated GPS updates, estimated arrival times, and streamed route changes to mobile clients with reconnect support. Designed retention policies and downsampling queries for historical trip analysis.

Education

Indian Institute of Technology Hyderabad

Bachelor of Technology - BTech, Computer Science and Engineering

Credentials

AWS Certified Developer - Associate, 2026

Linux Foundation: Introduction to Kubernetes, 2025

Honors

Institute Academic Excellence Scholarship, 2024-2026

Inter-IIT Tech Meet Finalist, 2025

Profile Note

This is a synthetic profile created for document-processing and token-tuning QA.

Education

Indian Institute of Technology Hyderabad
Bachelor of Technology - BTech, Computer Science and Engineering
July 2022 - May 2026

Relevant coursework: Algorithms, Operating Systems, Computer Networks, Distributed Systems, Databases, Compilers, Cloud Computing, Applied Cryptography

---

Licenses & Certifications

AWS Certified Developer - Associate, 2026
Issued for skills validation in this synthetic QA profile.

Linux Foundation: Introduction to Kubernetes, 2025
Issued for skills validation in this synthetic QA profile.

Volunteer Experience

Systems Club Coordinator
Systems Club Coordinator - organized talks on Linux internals, networking, distributed consensus, and performance profiling.

Inter-IIT Tech Meet participant
Inter-IIT Tech Meet participant - contributed backend services and deployment automation for a campus mobility challenge.

Peer mentor
Peer mentor - reviewed resumes and mock technical interviews for second- and third-year students.

Skills

Languages
Go, Java, Python, C++, SQL, Bash

Backend
gRPC, Spring Boot, REST, Kafka, Redis, PostgreSQL, TimescaleDB

Systems
Concurrency, distributed systems, Linux, networking, profiling, fault injection

Cloud & DevOps
Docker, Kubernetes, AWS, GitHub Actions, Terraform, OpenTelemetry, Prometheus

Testing
JUnit, Go testing, integration tests, load tests, chaos simulations
