Taylor Rivera
Senior Software Engineer | Platform & Reliability
Austin, Texas, United States

Summary

Backend engineer focused on high-throughput services and the operational discipline that keeps them healthy. At Northwind Systems I led the migration of a monolithic billing service onto an event-driven platform, cutting median checkout latency from 940ms to 210ms while holding error budgets intact. I care about measurable reliability, honest postmortems, and paying down complexity before it compounds into an outage.

Experience

Northwind Systems
Senior Software Engineer
March 2023 - Present (2 years 4 months)
Austin, TX
Led the decomposition of a billing monolith into six event-driven services, reducing median checkout latency 78% and eliminating a recurring class of double-charge incidents. Introduced idempotency keys across every payment write path. Built the on-call runbook and cut mean time to recovery by half.

Cobalt Analytics
Software Engineer
July 2020 - February 2023 (2 years 8 months)
Remote
Built a streaming ingestion pipeline in TypeScript and Python that sustained 40k events per second with exactly-once delivery semantics. Designed the schema-evolution strategy that let 30+ downstream consumers upgrade without coordinated deploys.

Education

Western Plains University
Bachelor of Science - BS, Computer Science (September 2016 - June 2020)

Certifications
Certified Kubernetes Application Developer

Honors & Awards
Internal Reliability Award, Northwind Systems (2024)
